

SENATE THIRD READING  
SB 528 (Jones)  
As Amended August 25, 2022  
Majority vote

## SUMMARY

Clarifies that upon the approval by the juvenile court judicial officer of a request for authorization for the administration of psychotropic medication, the copy of the order provided to the foster youth's caregiver is required to include the last two pages of form JV-220(A) or the last two pages of JV-220(B) and all medication information sheets that were attached to form JV-220(A) or form JV-220(B), which are all referenced in Rule 5.640 of the California Rules of Court. Further clarifies, if the child changes placement, the social worker or probation officer is required to provide the new caregiver with these same documents.

## Major Provisions

## COMMENTS

*Psychotropic medications and foster youth:* Psychotropic medications include drugs prescribed to manage psychiatric and mental health disorders or issues including depression, obsessive-compulsive disorder, attention deficit hyperactivity disorder, bipolar disorder, schizophrenia, and others. These medications include antipsychotics such as Seroquel, antidepressants like Prozac, mood stabilizers including Lithium, and stimulants like Ritalin.

Research has repeatedly indicated that children and youth in foster care face higher levels of inappropriate or excessive medication use and as a result, the Legislature passed several bills to address the issue, resulting in additional processes to ensure that proper levels of these medications are being prescribed.

In late 2011, the United States Department of Health and Human Services issued a letter to states encouraging them to coordinate with partners who worked with foster youth to address enhanced efforts to appropriately prescribe and monitor psychotropic medication among children placed in out-of-home care. As a result, the California Department of Health Care Services (DHCS) and the California Department of Social Services (CDSS) jointly developed the Quality Improvement Project (QIP) to strengthen the state's Medicaid and child welfare services (CWS) system by, among other things, improving safe and appropriate prescribing and monitoring of psychotropic drugs. The QIP has enabled the state to access the knowledge and perspectives of various experts, and has continued to hold workgroup meetings and set and accomplish objectives related to its mission.

Additionally, DHCS and CDSS, who have the shared responsibility for the oversight of mental health services provided to children and youth involved with county child welfare and probation agencies, developed and released state guidelines for the use of psychotropic medication with children and youth in foster care. According to these guidelines, a psychiatric evaluation includes a thorough mental status exam, complete review of current emotional and behavioral symptoms, and the assessment for potential psychosocial precipitants for the current presentation. It also should include the review of collateral documents provided by CWS, when available. These records provide critical history and context for appropriate case formulation.

Prior to the child's appointment, the prescriber is expected to review the collateral documentation when provided by the CWS social worker. The guidelines further stipulate that reports should ideally be received at least five business days prior to the appointment to allow ample time for review. The guidelines state that the prescriber's access to available historical information is critical for the provision of optimal care and list the following documents as representing optimal psychosocial history to share with the prescriber.

These documents should include: The Detention Hearing Report which describes what happened to the child and why the child was removed from the home. These conditions typically are the 'root cause' of the child or youth's emotional, cognitive, and/or behavioral dysregulation; the Jurisdiction/Disposition Report which includes additional information regarding the abuse and/or neglect experienced by the child in the current referral, history of prior referrals and cases (if applicable) which provides context for the current case, and provides more details regarding why out of home care was necessary; copies of significant additional court reports, i.e., those that document major changes in the family's situation; copies of all prior psychological evaluations and Initial Treatment Plans/Updates for the client; all prior mental health, physical health, and developmental records; copies of psychiatrist's Admission and Discharge summaries and the medical H & P (History and Physical) report from all psychiatric hospitalizations for the client; Order Authorizing Health Assessments, Routine Health Care, And Release of Information (Blanket Court Order) or case-specific forms signed by the Court, as per county process); History of Child Placement report; current health and education passport (HEP), Individualized Education Plan (IEP) and IEP Triennial evaluation (Psychoeducational Assessment Report conducted by school staff once every three years as a condition of initiating and continuing an IEP), if applicable; and medication log to be attached to the JV-220, if available.

*JV-220*: Judicial approval (JV-220) is mandated by the California Rules of Court prior to the administration of psychotropic medications to children and youth in foster care. The Psychotropic Medication Protocol, also referred to as the JV-220 process, initiates the court authorization of psychotropic medications for dependents of the court. The JV-220 documentation specifies the dosage and medication plan, ideally including targeted goals. This is undertaken, to the extent possible, in collaboration with the child, family, caregiver, and other supportive collaterals. The prescriber should discuss the JV-220 with the child, family, and caregiver.

As soon as psychotropic medication is identified as a recommended part of a treatment plan, the foster youth's social worker or probation officer (some counties may utilize a Public Health Nurse) begins the process of completing the JV-220 which functions like a cover sheet for the full application, and must be accompanied by a completed and signed JV-220 (A) or (B) and thorough documentation before it is filed with the Court. The social worker or probation officer in charge of the case is responsible for filing the complete set of documents with the Court.

The JV-220 provides the Court with information about the child and where they live; contact information for the social worker or probation officer of the case; the input they have received from the child or caregiver about the medication plan, and their own input about the application; history of other recent medications and/or treatments along with information about who will be providing input and in what form; and provides the social worker or probation officer verification that the information included in the attachments is accurate and complete.

According to the Rules of Court, upon the approval or denial of the application for psychotropic medication, the county child welfare agency, probation department, or other person or entity who submitted the request must provide the child's caregiver with a copy of the court order approving or denying the request. The copy of the order must be provided in person or mailed within two court days of when the order is signed.

If the child changes placement, the social worker or probation officer must provide the new caregiver with a copy of the order, the last two pages of form JV-220(A) or the last two pages of JV-220(B), and the medication information sheets (medication monographs) that were attached to form JV-220(A) or form JV-220(B).

*Need for this bill:* As a result of the placement changes that many foster youth experience, they can often find themselves receiving inconsistent health care. When foster youth are moved from one home to another, rarely are they bringing with them accurate information about what illnesses they have had, what medications they have taken or are taking, and what progress they have made in school. This lack of information makes it difficult - nearly impossible, for the new caregiver and new medical provider to provide consistent care.

The provisions of this bill seek to ensure that a foster youth's caregiver has access to all relevant medical and psychiatric history, including the court order approving or denying an application for psychotropic medication (JV-220), the last two pages of form JV-220(A) or the last two pages of JV-220(B), and all medication information sheets that were attached to form JV-220(A) or form JV-220(B), by including it in the list of forms required to be attached to the court order.

Current statute is clear that the child protective agency is required to provide the foster youth's caregiver with the current HEP as soon as possible, but not later than 30 days after initial placement of a child into foster care. Additionally, for each subsequent placement, the child protective agency is required to provide the summary within 48 hours of the placement. However, the sponsor of the bill, the California Academy of Adolescent Psychiatry, has reported instances in which their providers, upon meeting with foster youth for the first time, do not have access to their HEP, which greatly limits the ability for the physician to refill medications or prescribe new ones. The sponsors report that not having access to these records is a regular occurrence.

In a recent survey of California Academy of Child and Adolescent Psychiatry members treating foster youth, 44% reported access to a foster youth's JV-220 less than 10% of the time, and 28% reported never having had access to the report prior to an appointment. The survey continues with 40% of these members reporting lack of access to the HEP less than 10% of the time and 40% report never having had access to the HEP while 30% reported access to the CWS worker less than 10% of the time, and 28% reported never having had access to the child's social worker.

### **According to the Author**

"Foster youth, some of our most vulnerable children, frequently change the health providers they see or the foster families they live with, for reasons beyond their control. Oftentimes, their changing lives lead to a loss of critical health records, such as the prescription of antidepressants, mood stabilizers, antipsychotics, and other psychotropic medications. SB 528 will clarify existing law by ensuring that the foster youth's caregiver is provided with important court documents upon approval to take psychotropic medications so that medical providers have an accurate picture of their current and past health history."

**Arguments in Support**

No letters in support for the current version of this bill have been submitted.

**Arguments in Opposition**

No letters in support for the current version of this bill have been submitted.

**FISCAL COMMENTS**

None. This bill has been keyed non-fiscal by the Legislative Counsel
