**SUBJECT:** Familial Adenomatous Polyposis Awareness Week

**SOURCE:** Author

---

**DIGEST:** This resolution proclaims the week of June 14, 2026, to June 20, 2026, inclusive, as Familial Adenomatous Polyposis Awareness Week in California.

**ANALYSIS:** This resolution makes the following legislative findings:

- 1) Adenomatous polyposis coli (APC)-associated polyposis, which includes familial adenomatous polyposis (FAP), is a hereditary condition that results in a high number of polyps developing within the colon and rectum, significantly increasing an individual's risk of colorectal cancer.
- 2) Genetic changes in the APC gene related to FAP leads to the development of hundreds of polyps within the colon, frequently beginning during an individual's teenage years, that, if left untreated, leads to cancer developing, on average, by 39 years of age.
- 3) Attenuated familial adenomatous polyposis (AFAP) is a variant of the condition, that causes fewer polyps to develop at a later age, with an average cancer diagnosis of 55 years of age if left untreated.
- 4) During this week, the Stanford University Department of Health Policy joins with the Stanford Genetics and Genomics Program and the Stanford Cancer Center to raise awareness of FAP and AFAP. California residents are encouraged to gather their family health history and share that information with their health care provider for early screening and prevention of cancers associated with these conditions.

This resolution proclaims the week of June 14, 2026, to June 20, 2026, inclusive, as Familial Adenomatous Polyposis Awareness Week in California.
